Almedina Termkolli

Product Designer

UI/UX Design | Design Systems | Healthcare SaaS | Data-Heavy Interfaces & Interactive Prototyping

termkollialmedina01@gmail.com | Pristina, Kosovo | Open to remote work
Portfolio: almedina-ter.github.io/portfolio | LinkedIn: linkedin.com/in/almedina-termkolli-a11359230

PROFESSIONAL SUMMARY

Product Designer with three years' experience in healthcare technology at 91 Life, promoted twice from Junior UI/UX Designer to Product Designer. Currently designing interfaces, workflows and interactive prototypes for a complex healthcare SaaS application, including dashboards, patient overviews, timelines, analytics views and data tables, where information has to be clear and quick to interpret. Contributed to the product's initial design system and now help evolve it, using component-based thinking to keep new features consistent and scalable. Strong visual design foundation, combined with the ability to turn product requirements into structured, user-centred interfaces in Figma and to prototype faster with AI-assisted tools such as Figma Make, Claude and ChatGPT.

CORE COMPETENCIES

Product & Interaction: Product Design, UI/UX Design, User Interface Design, Interaction Design, User-Centred Design, User Flows

Systems & Prototyping: Design Systems, Component Libraries, Wireframing, Interactive Prototyping, AI-Assisted Design Workflows

Complex Interfaces: Information Architecture, Dashboard Design, Data Visualisation, Visual Hierarchy, Usability, SaaS, Healthcare Technology

Visual Design: Iconography, Colour Systems, Website Layouts, Social Media & Marketing Graphics

PROFESSIONAL EXPERIENCE

Product Designer — Jan 2026 – Present

91 Life | Healthcare Technology | Pristina, Kosovo

- Design interfaces and workflows for a complex healthcare SaaS application, including patient overviews, dashboards, analytics views, timelines, data tables and modals.
- Structure information architecture, visual hierarchy and data visualisation for data-heavy screens, so dense patient and analytics information is easy to scan and hard to misread in a high-stakes healthcare context.
- Translate product requirements into structured user flows and interfaces, defining layouts, interaction patterns and component usage for new features.
- Prototype complex, multi-step workflows in Figma and Figma Make, producing increasingly sophisticated interactive prototypes that show how features behave before development.
- Refine and evolve the established design system, updating components and patterns so new features remain consistent, usable and scalable across the product.

UI/UX Designer — Jun 2024 – Dec 2025

91 Life | Healthcare Technology | Pristina, Kosovo

- Contributed to building the product's initial design system, helping establish the visual and structural foundations of the application.
- Designed reusable UI components for the product's first component library, moving interface work from one-off screens towards a shared, component-based system.
- Developed iconography and colour systems that strengthened visual consistency across product interfaces.
- Built early wireframes and interactive prototypes to define screen structure and core user flows ahead of high-fidelity design.
- Helped improve consistency and usability across product interfaces by aligning screens with the emerging design system.

Junior UI/UX Designer Nov 2023 – Jun 2024

91 Life | Healthcare Technology | Pristina, Kosovo

- Proposed interface concepts and design elements that influenced, and were later incorporated into, the company's core product.
- Designed an application concept for a hackathon, taking an early idea to a presentable interface concept in a short, fixed timeframe.
- Created UI mockups, visual concepts and website layouts for digital products and company websites.
- Produced social media graphics, marketing materials and office visual mockups in Adobe Illustrator and Photoshop, working across marketing, web and product design requests.

TECHNICAL SKILLS & TOOLS

Design & Prototyping: Figma (interface design, component libraries, design systems, interactive prototyping); Figma Make (AI-assisted prototyping and rapid concept exploration)

Visual Design: Adobe Illustrator (vector graphics, iconography, marketing assets); Adobe Photoshop (image editing, social media and marketing visuals)

Web Design & Development: Webflow (designing and building websites without code)

AI-Assisted Workflow & Productivity: Claude and ChatGPT (ideation, exploring design directions, structuring requirements, drafting documentation); Notion (design documentation); Jira (tracking design work within the product development process)

EDUCATION

Bachelor of Art Director Oct 2020 – Aug 2023

Graphic Design

Bachelor of Computer Science and Engineering Oct 2018 – Aug 2020

Computer Science

LANGUAGES

English (Professional working proficiency)

Albanian (Native)
